COMPATIBLE CANON imageRUNNER AND imageRUNNER ADVANCE LBPs AND MFPS NOW SUPPORT ON-THE-GO PRINTING FOR ANDROID™

MISSISSAUGA, ON, 2 July 2013 – Extending support for mobile office users and consumers, Canon Canada Inc., a leader in digital imaging solutions celebrating its 40th anniversary, today announced its Canon Mobile Printing App for devices supported by the Android operating system (OS)¹, including tablets and phones. Canon Mobile Printing enables users in home office environments, as well as corporate and SMB environments, to send print jobs directly from their mobile device to compatible Canon laser printers (LBPs) and MFPS.

The Canon Mobile Printing Application is compatible with most imageRUNNER and all imageRUNNER ADVANCE MFPS, as well as select imageRUNNER LBP printers. The app is easy to use and can search for and identify Canon LBPs and MFPS within a wireless broadcast range – and automatically save these devices for future use. If the Canon LBP or MFP cannot be found within a wireless broadcast range, users can manually enter the IP address of the Canon device to list it as one of their available print devices.

The app will support preview modes and is designed to print a variety of documents including JPEG, GIF, BMP, PNG, WEBP, PDF³ files and photographs, as well as web pages directly through the app's user-friendly interface. For added convenience, users can tailor paper size, colour output, select from single-sided or two sided printing, portrait or landscape orientation, and number of copies directly from the app. Depending on the finishing features on the printer, documents can also be stapled directly from the menu. Additionally, users can instruct the app to feed paper automatically or via the output device's manual bypass.

The Canon Mobile Printing App is available as a free download from Google Play™. Refer to link - <https://play.google.com/store/apps/details?id=jp.co.canon.oip.android.opal>
